

## FOM

We will try to observe the effect of angular distribution of bremsstrahlung photons on the polarization. Electrons w/  $E_e = 25$  MeV and Al converter are used.

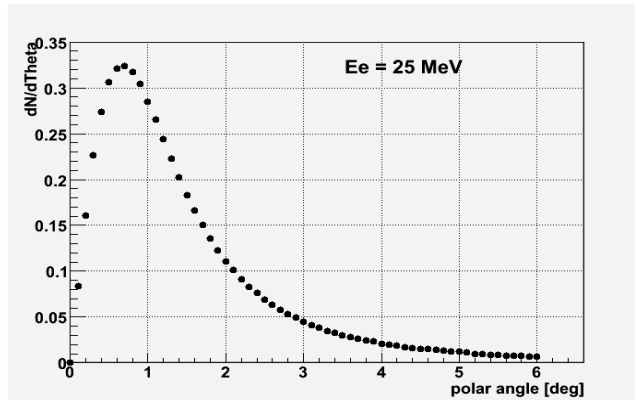

Fig. a. Angular distribution of bremsstrahlung photons.

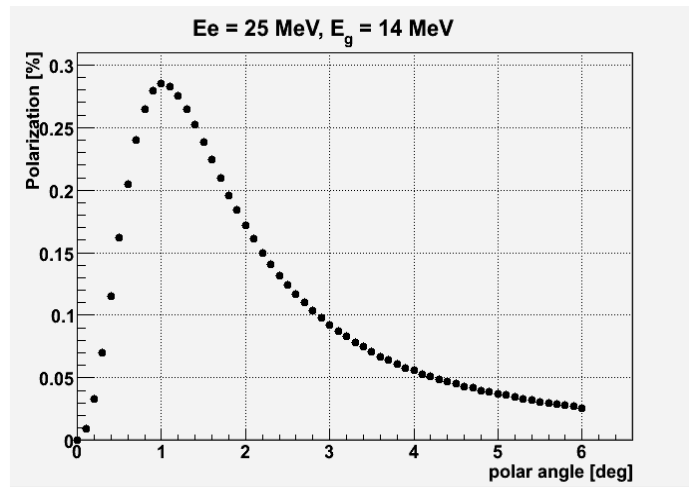

Fig. b. Polarization of 14 MeV photons vs. polar angle. Al converter.

Fig. c. Polarization weighted with  $dN/d\theta$  values.

The FOM  $\sim \text{Yield} * P^2 \sim (dN/d\Theta) * (\text{Polarization})^2$ . Using Figs. *a* and *b* we can build FOM plot.

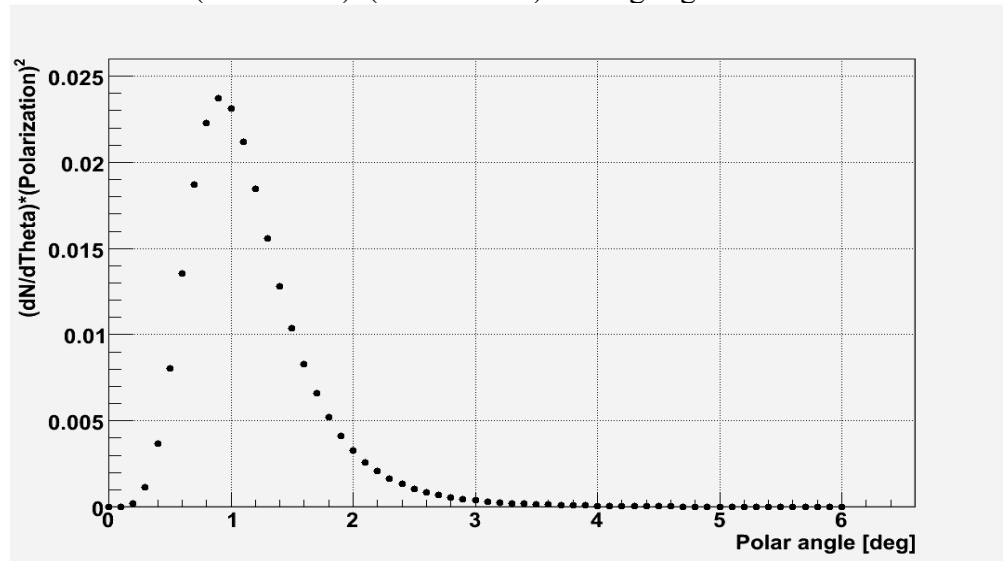

Fig. d. FOM plot.
